CLASS "B" II ANALYTIQUE

"A PORTICO OF A CHURCH"

Many churches have a portico which forms shelter for the entrance, and becomes an important element of the design.

The word portico has been defined, "a colonnade space forming an entrance or vestibule with a roof supported on at least one side by columns." It was first used to refer to the space directly behind the peristyle of temples, and now includes in its broader sense any roofed entrance motif designed to shelter the public entering a building. Viollet-le-Duc compares a portico of his period to a cloister; saying that both are arcaded galleries reposing on uprights, a cloister having four sides, a portico only one.

This problem is the design of a portico the character and style of which is left entirely to the competitor. The greatest dimension in plan in any case is not to exceed sixty feet in length, the width and height are left to the competitor.

### CLASS "B" III ESQUISSE-ESQUISSE SOLOMON M. DELEVIE PRIZE

Through the generosity of Mr. Solomon M. Delevie, a prize of \$25.00 will be awarded for the best solution of this problem.

#### "A MEMORIAL BRIDGE"

A railroad follows the bank of a stream which is to be crossed by a bridge for vehicular traffic, and it is proposed to make an architectural feature of a signal tower which is to rise above the level of the bridge. The railroad itself shall be 20 feet, the stream is 30 feet wide and the piers between the railroad and the stream shall be at least eight feet wide. The height of the bridge above the water is left to the competitor.

JURY OF AWARDS: John Theodore Haneman, Lansing C. Holden, Jr., Clinton Mackenzie, Wm. E. Shepherd, Jr., Wm. Van Alen, Whitney Warren.

#### PROGRAM IV

#### "DECORATION FOR TOP OF GATEPOST"

The entrance to a large country estate is through a pair of wrought-iron gates which are supported by two gateposts twelve feet high and three feet square.

The posts are of brick with limestone caps, as shown in the accompanying blueprint. The problem is to design a suitable decoration to surmount these gateposts. The decorations are to be in limestone the same as the caps and should be so

treated as to make posts and decorations a harmonious ensemble. The type of decoration is left to the imagination of the student. The competitor may design a decoration which he intends to duplicate for the other post or he may wish to make a pair which will be different one from the other, in which case he will present two sketches but they must be well balanced and harmonize one with the other, as they will be judged as a pair and not as separate sketches.

JURY OF AWARDS: Edmond R. Amateis, Arthur F. Brinckerhoff, Allan Clark, Anthony de Francisci, Gleb Derujinsky, Robert G. Eberhard, Edward McCartan, Charles G. Peters, Charles E. Tefft, John V. Van Pelt.

#### "A RIDING SCHOOL"

The site for a riding school is a rectangle 300 feet on an avenue facing the park and flanked by two minor streets, running at right angles. The depth of the property is 200 feet. The building should have dignity and be monumental in character due to the importance of the site.

The elements required are:

1. The ring which is to be not less than 75 feet by 150 feet.
2. An ample lounge at least 25 feet by 50 feet, overlooking the ring.
3. A gallery around a portion of the ring in addition to the lounge for seats for horse show.
4. Locker rooms, showers, toilets, etc.
5. Stables, which may be on several floors, to accommodate 100 horses; with runway to the mounting space; all box stalls 150 square feet each.
6. Ample space for mounting outside of the ring and direct exit for the riders going outside the building.
7. Office for control.

## CLASS "A &amp; B" ARCHAEOLOGY II PROJET

## "A GREEK TEMPLE"

The problem is the reconstruction of an amphi-prostyle temple using the Ionic order. This is a small temple consisting only of a square or oblong cell or room, which usually contains the statue of the divinity, opening toward the East where there is a portico of four columns. This portico is repeated at the rear. The temple is roofed and pedimented and the whole construction rests on a base of broad steps.

The Ionic order, a delicate form, was seldom used for large buildings, never so far as we know for peripteral temples. A fine example of the type desired is the temple of the Wingless Victory in Athens built by Callicrates about 430 B. C. In this example the temple stood on a platform surrounded on three sides by balustrades and the altar of the goddess stood in the open space in front of the entrance.

Columnar architecture has lived, since the time of the Greeks, on the treasures of their architecture. In a very short period they developed and refined four orders of the greatest beauty. The care with which they worked out the smallest details of proportion is one of the great traditions of the profession.

The greatest dimension in plan should not exceed 30 feet, and the width of the front of the building is not to exceed 18 feet.
